Design System (v2)

DELITESS Design System

Palette — Light

Palette — Dark

Contrast check

Type scale

Chicken adobo

Marinate chicken in soy sauce and garlic.

45 min · Filipino

headlineSmall · 20sp Bold · screen and recipe titles

bodyMedium · 16sp Regular · ingredients and steps

labelSmall · 12sp Regular · captions, uses text-secondary

Spacing — base unit 8px

space/1 · 8px · list item gap

space/2 · 16px · edge padding

space/3 · 24px · section breaks

space/4 · 32px · major layout

Components

RecipeCard

AskAiComposer

AppNavBar

NumberedListItem

lib/widgets/numbered_list_item.dart

EmptyState

lib/widgets/empty_state.dart

SaveButton

lib/widgets/save_button.dart

Step A: Palette, as a ColorScheme

```
final lightScheme = ColorScheme.fromSeed(  
  seedColor: const Color(0xFF8EC7E3),  
  brightness: Brightness.light,  
);
```

```
final darkScheme = ColorScheme.fromSeed(  
  seedColor: const Color(0xFF8EC7E3),  
  brightness: Brightness.dark,  
).copyWith(  
  surface: const Color(0xFF232D35),  
);
```

Contrast: navy text (#3A4750) on the cream background (#FAF6EF) measures 8.87:1, well past the 4.5:1 minimum.

Dark mode: yes, decided now, not deferred. Rather than a full-black dark theme, the light mode's navy/cream relationship is inverted: navy becomes the background (#232D35, a deepened version of the same navy, not pure black) and cream becomes the text. Cream text on that dark navy background measures 13:1. The primary (#8EC7E3) and accent (#C9E4EE) colors are unchanged in dark mode since they are already light enough to read clearly against a dark background.

Step B: Type scale, as a TextTheme

```
textTheme: const TextTheme(  
  headlineSmall: TextStyle(fontSize: 20, fontWeight: FontWeight.bold),
```

```
bodyMedium: TextStyle(fontSize: 16),
labelSmall: TextStyle(fontSize: 12, color: AppColors.textSecondary),
),
```

Heading maps to headlineSmall (20sp, bold, screen and recipe titles). Body maps to bodyMedium (16sp, regular, ingredients and steps). Caption maps to labelSmall (12sp, regular, prep time and tags, using the new text-secondary color).

Step C: Spacing, as constants

```
class AppSpacing {
  static const double xs = 8;    // space/1
  static const double sm = 16;   // space/2
  static const double md = 24;   // space/3
  static const double lg = 32;   // space/4
}
```

Base unit: 8px. Screen edge padding: 16px. Gap between list items: 8px. Gap between sections: 24px.

Step D: Components, as files

Component	File	Constructor parameters	Appears on
RecipeCard	lib/widgets/recipe_card.dart	String title, String subtitle, Color thumbnailColor, VoidCallback onTap	Home, Search Results, Saved
AskAiComposer	lib/widgets/ask_ai_composer.dart	TextEditingController controller, VoidCallback onAttachPhoto, ValueChanged<String> onSubmit	Home
AppNavBar	lib/widgets/app_nav_bar.dart	int activeIndex, ValueChanged<int> onTap	all 4 screens
NumberedListItem	lib/widgets/numbered_list_item.dart	int index, String text	Recipe Detail (ingredients, steps)
EmptyState	lib/widgets/empty_state.dart	String message, IconData icon	Saved (empty state)
SaveButton	lib/widgets/save_button.dart	bool isSaved, VoidCallback onTap	Recipe Detail

Every component takes data and callbacks, never setState directly; SaveButton reports isSaved and calls onTap, it does not own the saved/unsaved state itself. const is used wherever the constructor allows it.

What changed, and why

Element	Prelim said	Now says	Why it changed
Dark mode	Not addressed; the prelim palette assumed one light theme with no explicit decision	Yes, decided now: a dark navy background (#232D35) with cream text, not full black, built by inverting the existing navy/cream relationship rather than inventing a new palette	Page A of this worksheet asks for the decision explicitly now rather than as a retrofit; building it as an inversion of the existing palette meant no new colors were needed,

			just the two roles swapped
Text color	One navy value covered all text, headings and captions alike	Split into text and text-secondary (navy/cream at 65% opacity), with its own row in the palette and its own TextTheme slot (labelSmall)	Building the Doc 2 mockups showed captions and titles need different visual weight; one flat navy value could not do both
